

**AMENDMENTS**

**In the Specification:**

Please replace the stated paragraph(s) within the specification with the following paragraph(s).

[0021] In order to use the device the ampule 12 is removed from a stored location, shaken or mixed to resuspend the medication into a solution. The ampule 12 is then punctured, preferably near an end portion [[34]] 52 of the ampule 12. When this occurs, an aperture or opening 16 is formed within the ampule 12. By squeezing the ampule 12, the medication is pushed out of the opening 16 and can be delivered to the individual requiring the medication. In the preferred embodiment, the ampule 12 further comprises a handle portion 34 which prevents excess pressure from being applied to the ampule 12 when the device is being punctured.
